

TigerGraph to Speak at Upcoming Graph Day Texas Conference

Graph Database Thought Leader to Discuss the Next Innovation in Graph Technology

REDWOOD CITY, CA – January 23, 2018 - [TigerGraph](#), creator of the world's first and only native parallel graph database platform for enterprise applications, today announced its presence at [Graph Day Texas](#), taking place Jan. 27 in Austin, TX. The company will be sponsoring and speaking at the event.

Dr. Victor Lee, director of product management at TigerGraph, will deliver an overview of the company's distributed [Native Parallel Graph](#) and its deployment as a fraud detection system that manages hundreds of billions or more graph elements to detect risk and fraudulent groups in real-time. He will also discuss the techniques behind the distributed Native Parallel Graph platform, including how it partitions graph data across machines, supports fast update, and the ability to perform fast graph traversal and computation. In addition, he'll share a subsecond real-time fraud detection system managing 100 billion graph elements to detect risk and fraudulent groups.

Session Details-at-a-Glance

What: [Real-Time Deep Link Analytics: The Next Stage of Graph Analytics](#)

When: Saturday, January 27, 2018

Where: AT&T Conference Center at the University of Texas, Austin, TX

Who: Dr. Victor Lee, senior product manager, TigerGraph

In September 2017, TigerGraph [announced](#) its emergence from stealth with \$31M in Series A funding, the general availability of the TigerGraph technology and availability of both its Cloud Service and GraphStudio, TigerGraph's visual software development kit (SDK). TigerGraph's Native Parallel Graph Technology (NPG) powers real-time deep link analytics for enterprises with complex and colossal amounts of data. The technology is already in use by leading customers including Alipay, VISA, SoftBank, State Grid Corporation of China, Wish and Elementum.
